

GenaFlexstore®

Eureka!

The solution for water storage.

The GenaFlexstore® is a worldwide patented closed water storage system in which the flexible tank liner and floating cover are integrated to one unit. A closed water storage system is the best solution against algae growth and pollution of the water, as external influence on the water quality is no longer possible.

The GenaFlexstore® is suitable for rain-; drain- and drinking water storage. Through the simple construction of the GenaFlexstore® installation can be done easy and quickly. In-/outlets can be installed through a waterproof entrance in the floating cover. Inlet of water should always be done through the bottom of the tank.

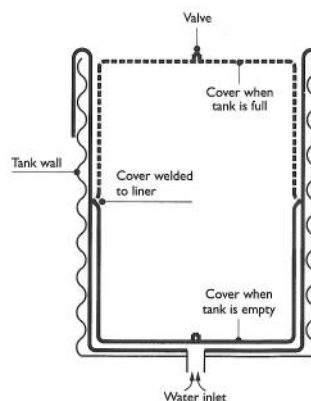

The use of high quality reinforced and UV-resistant materials guarantees a long life time and due to the integrated system flapping damage to the liner is excluded. That's why the system is extremely suitable for export and for clean drinking water storage.

The system is provided as full concept, including tank. The GenaFlexstore® is also applicable in existing tanks.

Why a closed tank liner system ?

- Optimal water quality by prevention of algae growth and dirt like leaves, sand, dust etc.
- Less chemicals and energy necessary through high water quality.
- Simple and therefore fast installation without extra demands to foundation and tank.
- Long life time due to the use of durable materials.
- No flapping damage due to integrated system.
- No evaporation of water.
- Low maintenance.
- No cultivation upon the floating cover.

That's why the Genap closed tank liner !
