

QUALITY GUARANTEE

Quality is an essential aspect for CIDAC, and therefore we place special emphasis on the attention to the quality of our products.

True to our reputation as a responsible and trustworthy company, CIDAC waterproofing products, with an experience of more than 50 years, focuses on compliance with European quality standards dictated by official bodies.

Our quality assurance department is responsible for planning and carrying out all necessary actions so that our products have the quality requirements demanded by our customers. For this, we work under ISO 9001: 2015 and both the IIR and EPDM membranes are fully guaranteed and **certified by the CE**.

The intrinsic characteristics of our products make them ideal products for the waterproofing of all types of roofs, walls, facades, foundations, rafts, reservoirs, ornamental lakes, hydraulic works of all types including drinking water reservoirs; thus enjoying extensive experience in work that exceeds the expectations of any waterproofing product.

To guarantee the best quality of our EPDM and IIR membranes, they obtain the **AENOR "N" Product Quality Certificate**. Brand that guarantees that the product meets the specifications and requirements set out in the corresponding standard and therefore is suitable for such applications. Aenor certifies that the product Hidrostan, Plastic and Rubber Sheets for Roof Waterproofing comply with the UNE EN 13956 standard:2006 and UNE-EN 13967:2006.

The close collaboration with our suppliers, the characteristics of the raw material, the manufacturing system, the thickness of the sheets and the rigorous quality control to which they are subjected, guarantee excellent stability and product quality.

In addition, the best guarantee so that an installation does not give any problem is that the products are of total confidence and that of course, they are professionally installed by qualified personnel taking into account the Occupational Health and Safety regulations, as well as the rules of good construction practice.

In some countries, as in Spain, there are no defined evaluation and acceptance systems for construction products that come into contact with water for human consumption. In this case, we assume responsibility for the viability of our materials and products for such application.
